

Farmers Organic: Chicken Manure Compost

- Greatly improves soil, water, and nutrient retention.
- Improves drainage, promotes root growth and nutrient absorption.
- Average N-P-K approximately 2-1-1
- Contains beneficial micro-organisms that help stimulate root growth in plants and makes available nitrogen more accessible.

Why use it over other products?

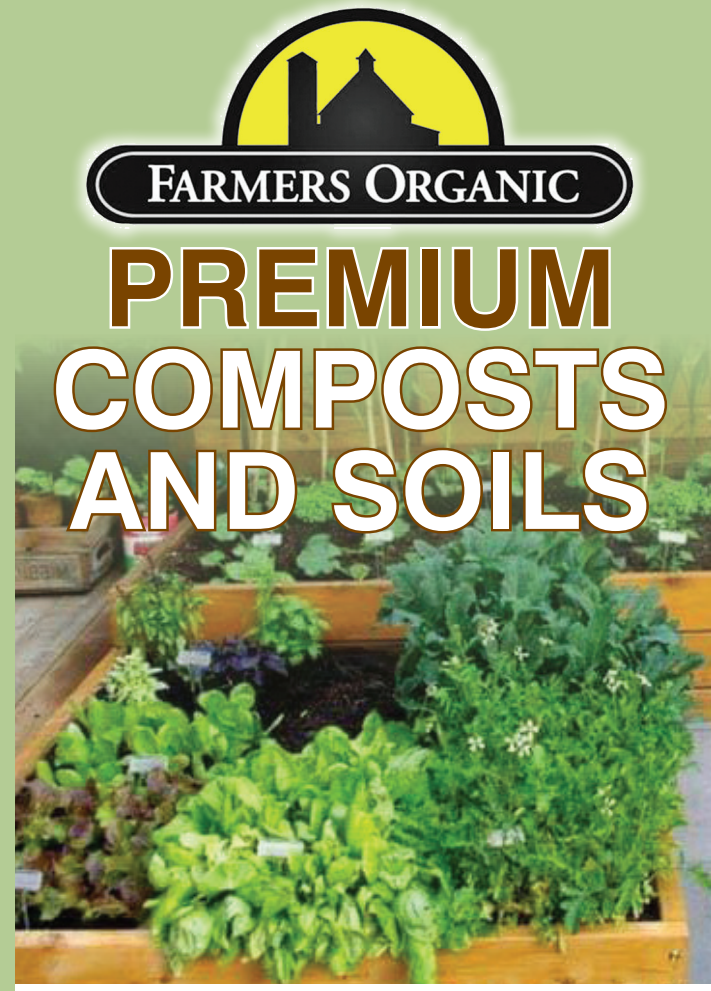

- More bang for your buck.
- Greater nutrient content than other composts.
- Great for all plants, flowers, trees, shrubs, and vegetable gardens.
- Pleasant Earth smell.

Farmers Organic: High Cotton Compost

- Consists of 100% Cotton Residuals, every part of the cotton plant, the lent, stalks, bowls, leaves, and seed meal. It has composted a minimum of three years to ensure it is chemical free and has a consistent texture.
- Average N-P-K approximately 1-1-1
- Excellent for promoting and improving drainage in poor soils.
- Full of beneficial micro-organisms.
- Will not burn plants.

Why use High Cotton?

- A good substitute for peat.
- Higher nutrient content.
- No filler material.
- Good for lawns, trees, shrubs and beds.
- Improves soil water and nutrient retention.
- Makes bad dirt good.

NitroOrganic is a great all natural and safe fertilizer similar to Milorganite. NitroOrganic is an all natural slow release fertilizer that will not burn. It allows your plants to take up nutrients as they grow. NitroOrganic will greatly improve the overall health and beauty of all plants, trees, and shrubs.

NitroOrganic is a safe and natural deer and rabbit deterrent. Using it in the garden will help keep them away for approximately 4-6 weeks. NitroOrganic is also great to use in food plots. Simply mix it with the seed when broadcasting. Not only will it feed your food plot, it will keep deer and other animals away for several weeks, giving the plants enough time to mature sufficiently before game animals begin feeding on the food plot.
